

Women Deserve Safer Sex !

Make HIV Prevention Part of Your Safe Sex Routine

About HIV

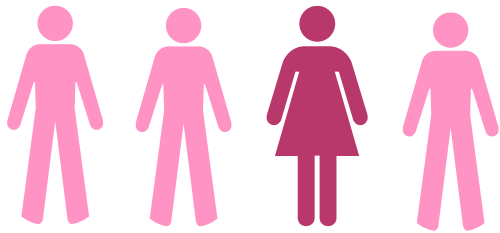

Human Immunodeficiency Virus (HIV) attacks the immune system and, if untreated, causes **Acquired Immunodeficiency Syndrome (AIDS)** [1].

Symptoms change over time.

Early stages: Flu-like symptoms · Rash · Diarrhea · Weight loss

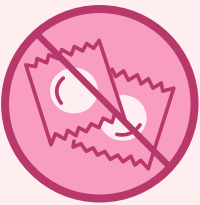

Advanced stages: Skin irritations · Swollen glands · Pneumonia · Fever/chills · Asymptomatic [2]

In 2022, roughly **1 in 4 people diagnosed with HIV** for the first time were women in Ontario [3].

Know your risk!

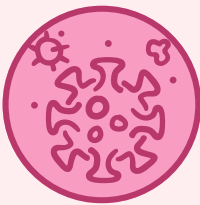

The following sexual activities may increase your risk of HIV infection [4,5]:

Unprotected sexual activities

Having multiple sexual partners

Having untreated STIs

Sharing sex toys

Certain unprotected sexual activities may increase your risk of HIV infection more than others [4]

Anal sex

Highest Risk

Vaginal Sex

Oral Sex

Lowest Risk

Safer Sex Practices for HIV Prevention

Know

Get Tested

Know your status [5]

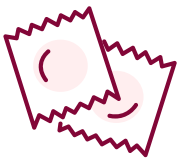

Communicate

Talk about testing, boundaries, and protection

Don't Assume Your Partner's HIV Status

You can't tell by appearance or words alone [5]

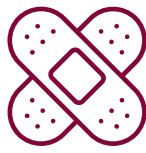

Protect

Condoms

PrEP – Pre-Exposure Prophylaxis

PEP – Post-Exposure Prophylaxis

If you are at risk, PrEP and PEP can help!

PrEP

If regularly exposed to HIV risk factors, **PrEP can prevent you from getting infected** [6].

How it works

Prevents successful HIV replication and spread by facilitating medication entry to genital tissues [6].

Your PrEP Advantage

99% effective against sexually transmitted HIV [7].

Available in Three Routines:

Daily pill

On-demand

Injectable

PEP

If you may have been exposed to HIV, **PEP can reduce your risk of infection** [8].

How it works

Prevents HIV from replicating in your immune cells, stopping a permanent infection from developing [8].

Your PEP window

**Within 72 hrs
Start medication
immediately**

**28 days
Take daily**

**80% lower
risk**

Cost and Coverage

OHIP and the Ontario Drug Benefit Program cover both PrEP and PEP. Costs may apply without insurance [9,10].
